COMBINING OUR RESOURCES TO SUPPLY YOU WITH DEPENDABLE ENERGY: ANYTIME. ANYWHERE.

MTU Onsite Energy is one of the core brands of Rolls-Royce Power Systems AG, which is a world-leading provider of high- and medium-speed diesel and gas engines, complete drive systems, distributed energy systems and fuel injection systems for the most demanding environments.

MTU Onsite Energy offers complete power system solutions: from mission critical to standby power to continuous power, to combined heat and cooling. We also provide a full line of service products to help you get the most from your equipment.

Customers around the world trust us to provide reliable power for a wide range of applications.

Our product portfolio covers diesel generator sets up to 3,250 kW, gas-powered cogeneration systems up to 2,500 kW and gas turbines up to 50,000 kW, furthermore medium-speed engines for land-based energy solutions up to 9,300 kWe as part of the Rolls-Royce Power Systems AG product portfolio.

More than 60 years of power generation systems expertise and over a century of diesel engine engineering experience have enabled us to provide complete solutions all over the globe. We continue to develop sustainable alternatives, with systems that produce greener energy from climate-neutral, regenerative fuels, such as combined heat and power (CHP) plants.

RATING DEFINITIONS FOR DIESEL GENERATOR SETS

Standby ratings

Standby Power

Standby Power ratings apply to installations served by a reliable utility source. The standby ratings are applicable to varying loads for the duration of a power outage.

Typical applications: industrial and manufacturing plants, residential areas, healthcare and hospitals, airports.

Standby Power with Overload ^(A)

Standby Power with Overload ratings apply to installations served by a reliable utility source. The standby ratings are applicable to varying loads for the duration of a power outage.

Typical applications: industrial and manufacturing plants, residential areas, healthcare and hospitals, airports. 10% overload is available.

Data Center Continuous Power

Data Center Continuous Power ratings apply to data center installations where a reliable utility power is available and comply with Uptime Institute* Tier III and IV requirements. At constant or varying load.

Typical applications: data centers. 10% overload is available.

* The Uptime Institute is a pioneer in creating and operating knowledge communities for improving uptime effectiveness in data center facilities and information technology organizations.

Prime ratings

Prime Power

Prime Power ratings apply to installations where utility power is unavailable or unreliable. At varying load, the number of generator set operating hours is unlimited.

Typical applications: construction sites, remote areas. 10% overload is available.

Grid Stability Power ^(A)

Grid Stability Power ratings apply to installations operating in support of utility networks or grids (especially when renewable power sources are used). At constant or varying load.

Typical applications: peak shaving, grid stability and capacity programs. 10% overload is available.

Continuous ratings

Continuous Power ^(A)

Continuous Power ratings apply to installations where one or several generator sets serve as utility. At constant or varying load, the number of generator set operating hours is unlimited.

Typical applications: power stations. 10% overload is available.

^A Only available for 50Hz markets

^B Unlimited hours in data center application where a reliable grid / utility is present.

Application descriptions, e.g. load factor, applies to MTU powered equipment.

CLASSIFICATION FOR DATA CENTER CONTINUOUS POWER ACCORDING TO UPTIME INSTITUTE

Tier I

Tier I is composed of a single path for power and cooling distribution, without redundant components, providing 99,67% availability.

Tier II

Tier II is composed of a single path for power and cooling distribution, with redundant components, providing 99,74 % availability.

Tier III

Tier III is composed of multiple active power and cooling distribution paths, but only one active path has redundant components and is concurrently maintainable, providing 99,98 % availability.

Tier IV

Tier IV is composed of multiple active power and cooling distribution paths, has redundant components and is fault tolerant, providing 99,99 % availability.

FOOTNOTES

- (1) Power output based on 400V, fuel consumption opt. emission level and standard generator.
For arrangements with other emissions, voltages and/or optional generators, ratings may vary.
Series 4000 without cooling package.
- (2) Ambient conditions and load application acc. to ISO 8528
- (3) Cooling variants: A2A: air-to-air charge air cooling (TD); W2A: water-to-air charge air cooling (TB)
- (4) Power available up to 32°C intake air temperature / 400m site altitude above sea level
- (5) Power available up to 25°C intake air temperature / 100m site altitude above sea level
- (6) All levels in accordance with European Noise Directive (2000/14/EC)

C/F: Consult factory

Cooling variants:

A2A: air-to-air charge air cooling (TD)
W2A: water-to-air charge air cooling (TB)

Available power for diesel generator sets – 50Hz / 1500 rmp

Standard:

// Site altitude above sea level: 400 m
// Intake air temperature: 40° C

TA-Luft:

// Site altitude above sea level: 100 m
// Intake air temperature: 25° C

NEA Singapore:

// Site altitude above sea level: 100 m
// Intake air temperature: 40° C

Available power for diesel generator sets – 60Hz / 1800 rmp

Standard:

// Site altitude above sea level: 400 m
// Intake air temperature: 25° C
